

g e o p h y s i c a l

Specializing in deepwater geophysical surveys, C & C engineers have developed HydroMap™, proprietary survey software, that depicts the coverage area on the navigation screen as it is being recorded. This results in precise charts of the seafloor in near-real time. With a fleet of six hull-mounted and one AUV-mounted Simrad multibeam systems, surveys can be performed from near water's edge to full ocean depth.

Geophysical Services:

- AUV Surveys
- Pipeline/Cable Route Preliminary Surveys
- Archaeological and Hazard Surveys
- Exclusive Economic Zone (EEZ) Surveys
- Damage Assessments
- MMS Requirements
 - Plan of Exploration Letters
 - Lease Term Pipeline Letters
 - Debris Searches
- Multibeam Bathymetry Surveys
 - Coastal
 - Full Ocean Depth
- On-board Data Processing Available
 - Map Generation
 - Interpretation
 - Drafting
 - Reporting
- Results of On-board Processing
 - Better Communication
 - Fast Turn-around
 - Quality Control
 - Route Determination
- Speculative Surveys
- C-Nav™ Satellite Differential GPS Services
